

# PC Assemble

I learned new skills and knowledge from the PC assembly lab, including how to correctly assemble and disassemble a PC while being assisted by a skilled lab assistant. Before this, I would often ask for instructions on how to assemble a PC because I lacked knowledge and direction. Fortunately, the PC that my group (Group 12) assembled and disassembled lit up, demonstrating our newly acquired PC assembly skills. Furthermore, to assess our knowledge from the lab session, we must complete a brief exam on PC assembly.
